R.S.B. Carbon

The top is made of 95% carbon fiber composite, which can transfer string vibration into phenomenal acoustic performance, dynamic and balanced.

Aluminium Reinforced

The neck is made of carbon fiber composite, but reinforced with an aluminum rod inside so that it won't bend over time.

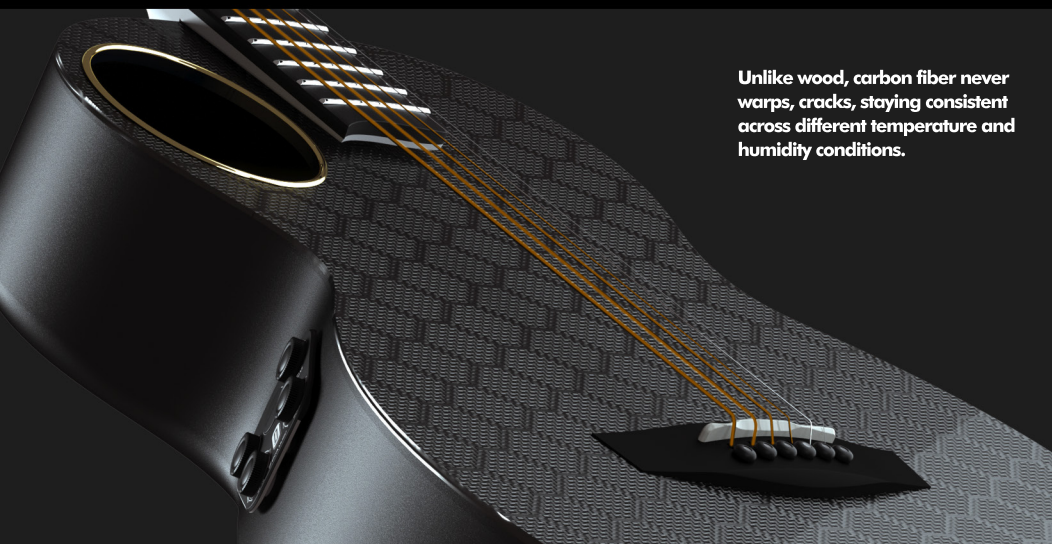

Acoustic Elevated Neck

This elevated neck design releases the pressure to the top created by the fretboard from the 14th fret and up. The vibration of the top is drastically enhanced.

Unlike wood, carbon fiber never warps, cracks, staying consistent across different temperature and humidity conditions.

Optional Sizes

41' Plus AJ: This full-size model offers 30% more acoustic cavity of the guitar.

36' Mini: This 3/4-size model produces a more balanced tone.

Accessories

Only the essentials

1/4" Audio Cable

USB Type-C Charging Cable

Truss Rod Wrench

Leather Strap

AcousticPlus®

Pickup System

ENYA AcousticPlus® system allows players to add sound effects from the instrument itself, with no external devices needed, providing a simple but effective way to process the natural sound. All the sound enhancing effects are controlled with very simple and discreet knobs, giving players total control to adjust the reverb, chorus and other effects, with or without plugging into an amp. We hope this technology could bring more fun and inspiration to your playing.

The Controls of AcousticPlus®

Reverb Room/Hall

This knob selects the reverb type, as well as controls the level of them.

The **"Room"** side gives a natural room reverb to add a little bit of depth and sparkle to the sound. The **"Hall"** side gives you the wide-range, heavenly, concert hall-style ambience.

Volume On/Off

Firstly, it functions as a volume knob: turn clockwise, to get louder.

Meanwhile, press and hold it to turn on and off the AcousticPlus® system, plugged in or not, giving you the reverb, chorus and delay, which offers you more possibilities in your creative process.

Effects Chorus/Delay

This knob selects the modulation type, as well as controls the level of them. The **"Chorus"** side gives you a lush chorus with a fixed rate, not too mellow, not too intense. Turn the knob clockwise to add depth. The **"Delay"** side gives you a digital style delay, with a fixed rate. Turn the knob clockwise to add intensity.

Caution:

1. Try not to set all controls to max. to avoid feedback issue;
2. Turn the system off after playing to better preserve the battery;

Mic. Tuner

The AcousticPlus® is a dual-mode pickup system with a piezo to pick up the tring vibration, and a microphone picking up the percussiveness of the top in the fingerstyle playing. The **Mic.** knob controls the level of the microphone.

Also, tap the knob to activate or shut off the onboard tuner.

Charging Port Battery Indicator

The AcousticPlus® pickup on X4 Pro supports USB Type-C charging.

The rim LED light of the port serves as a battery indicator:

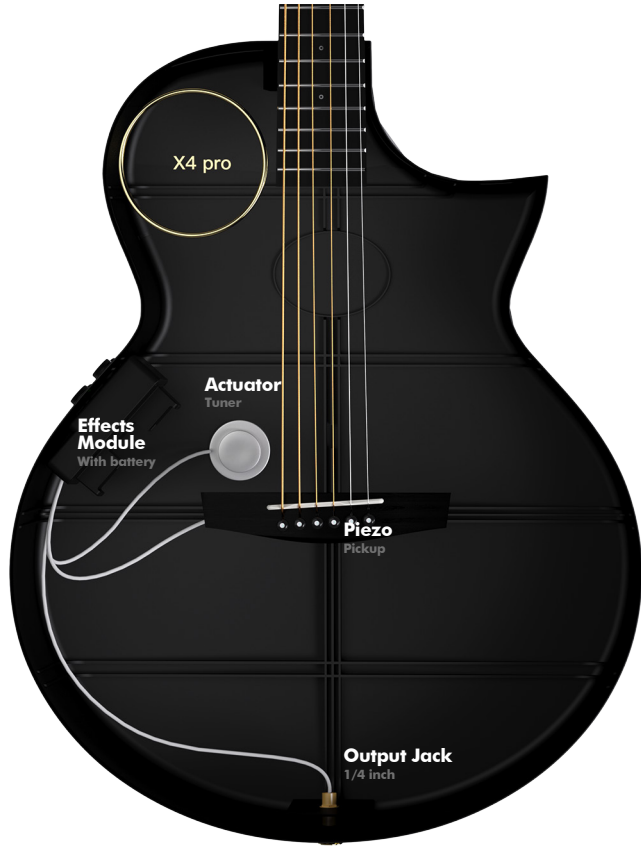

GREEN: System on;
RED: System on, with low battery
OFF: System off, with dead battery

Charging & Battery

The X4 Pro AcousticsPlus® guitar comes with an installed **18650** rechargeable battery. USB charging cable is included.

Connect the guitar to any USB power source like a phone charger to charge the AcousticPlus system.

The battery could last for **15** hours for stage performing, **8** hours for AcousticPlus® only, once fully charged. And it would take **6** hours to fully charge the battery.
