## D51 ARSENAL DISTORTION

PURE DISTORTION, SHARP PARTICLES, DELICATE DYNAMIC, TRUE BYPASS

### ARSENAL DISTORTION

Create thousands of weapons of mass distortion! Distortion Arsenal lives up to its name by equipping you with all kinds of distortion arms from classic British crunch to modern high-gain tones. Broad tone adjustments take your sound where you want it and a Presence knob takes a sharp distortion and gives it some extra room. Two-mode mid-freq switch gives you even more tone possibilities. True Bypass design minimizes tone loss.

Standard distortion and clear profile fits a variety of music occasions.

This default **MIDS.M** offers two different mid-frequencies. **B** brings a more aggressive tone; and with the same setting, **A** enables you to experience a stormy distortion.

This sensitive **TONE** could adjust the overall equalizer setting and create various tones.

When raising **PRE** degree as well as controlling **TONE**, ARSENAL DISTORTION could create a surging dynamic distortion tone.

When lowering **DIST**, ARSENAL DISTORTION presents a standard PLEXI feeling. Under **low DIST**, the melody sounds very clear with true feedback for every picking. Under **high DIST**, the tone sounds pure with a high sensitivity for paddles.

*Make your own Tone*
